■ **ETH News:**

- A new software architecture called 'Turbo Geth' has been released for ETH developers to test out. The architecture is a scaling solution which rewrites the backend of the Ethereum Foundation's in-house software which calculates the constantly growing history of computations on the chain. The software claims it will cut down storage of computations to one-fifth of its current size. The update allows ETH nodes to run on cheaper hardware, thereby indirectly aiding in maintaining the networks decentralized structure.

■ **Trading History YTD:**

- Despite rallying aggressively in April 2018, ETH has continued to fall during the spring and summer. Small plateaus have consistently broken lower on high volume.

■ **Current Environment:**

- ETH further cemented a short-term bottom above US\$200 as the coin traded sideways during the beginning of the week. Bullish price action was later seen as the coin rallied ~20% to ~US\$240 at the time of print. ~US\$240 was the previous support level before the last decline in early September.

Coin Profile

Ethereum is a decentralized platform that runs smart contracts: applications that run exactly as programmed without any possibility of downtime, censorship, fraud or third-party interference. These apps run on a custom built blockchain. Ether is the cryptocurrency generated by and used on the Ethereum platform.

■ BCH News:

- No significant BCH-related news.

■ Trading History YTD:

- After rallying throughout May, BCH has ground slowly downward alongside the general cryptocurrency markets over the course of the summer and into the fall.

■ Current Environment:

- BCH made new short-term lows early last week around ~US\$400 before rallying in the back half of the week; this was supported by a rally in the general cryptocurrency markets as well. Over the past couple days, the coin has rallied aggressively rising 20% to return to its long-term trendline.
- Volumes have made a clear bottom at 0.5mm coins and have consistently climbed in the past two weeks.

Coin Profile

Bitcoin Cash is peer-to-peer electronic cash for the Internet. It is fully decentralized, with no central bank and requires no trusted third parties to operate. Bitcoin Cash is the continuation of the Bitcoin project as peer-to-peer digital cash. It is a fork of the Bitcoin blockchain ledger, with upgraded consensus rules that allow it to grow and scale.

LTC News:

- Charlie Lee, LTC's founder, took to social media last week to dispel fears around Litecoin and its main features. Over Twitter the founder discussed transaction volume, security, payment processors, fees, mining and platform development.
- Specifically, Mr. Lee handled up to \$200 million worth of transactions on the network, Mr. Lee said. Additionally, with more than 100,000 nodes on the network, Mr. Lee said the crypto industry is maturing.
- Finally, Mr. Lee noted that the DoS bug patch released just a few days ago.

Trading History YTD:

- Since December 2017 which saw LTC rally more than 400%, the price of LTC has steadily declined throughout 2018. Some counterrallies have been seen since then, but nothing that has broken the descending triangle formation.
- Volumes have started to rise in LTC after stabilizing at four million coins traded per day. Volumes recently broke through five million.

Current Environment:

- LTC showed resilience last week as US\$50 has continued to be defended as the short-term bottom. Volumes have consistently grown since late May; 4 million coins per day continues to be the short-term average.

Litecoin is a peer-to-peer cryptocurrency and open source software project released under the MIT/X11 license. Creation and transfer of coins is based on an open source cryptographic protocol and is not managed by any central authority. The coin was inspired by, and in technical details is nearly identical to, Bitcoin.

■ **DASH News:**

- DASH use continues to rise in Venezuela as an online grocer there is now processing more than 80 transactions per day using DASH.
- Other DASH users have posted videos to their social media accounts which show them buying pizza from Papa Johns using DASH.
- DASH Text launched last week in Venezuela which allows crypto users to process crypto transactions through QR codes and with no online connectivity.

■ **Trading History YTD:**

- The price of DASH has trended negatively over the past year despite various counterrallies and a recent rise in volume due to increased adoption.
- Market participants have attributed this year's decline to sentiment in the overall crypto markets as well as the coin more than quadrupling in price during late 2017.

■ **Current Environment:**

- DASH continued to consolidate sideways last week despite volumes settling at a new relative high of one million coins per day.

Coin Profile

Dash is an open source peer to peer cryptocurrency. On top of Bitcoin's feature set, it currently offers instant transactions, private transactions and operates a self-governing and self-funding model that enables the Dash network to pay individuals and businesses to perform work that adds value to the network. Dash's decentralized governance and budgeting system makes it a decentralized autonomous organization.
